FULL-STACK SOFTWARE ENGINEER

Full-Stack Engineer with 3+ years of experience building scalable, production-grade web applications. Specialized in React, Next.js, Node.js, and PostgreSQL/MongoDB. Delivered high-performance systems serving 20,000+ monthly users with sub-300ms API latency. Strong focus on clean architecture, CI/CD automation, and business-impact-driven development.

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Engineer

Remote | JAN 2023 - Present

- Architected and delivered complex, scalable web applications using Node.js, Express, MongoDB, PostgreSQL, and modern front-end frameworks.
- Designed system architectures for high-traffic applications, including database schemas, API structures, caching strategies, and modular, maintainable components.
- Built dynamic, responsive front-ends optimized with Vite, delivering lightning-fast user experiences.
- Developed robust RESTful APIs and real-time services, including authentication, authorization, and secure data handling.
- Integrated AI-powered features such as chatbots, recommendation engines, and predictive analytics using external AI APIs and libraries.
- Implemented full-stack features including CRUD operations, complex business logic, and seamless third-party API integrations.
- Managed full project lifecycle — from system design, architecture, development, testing, to deployment — independently.
- Documented and applied best practices for system design, AI integration, reusable components, and maintainable codebases.

PROJECT

Gym App

github.com/Adib-96/gym_app

- Architected a full-stack gym management platform with authentication, subscription handling, and member tracking.
- Designed RESTful APIs using Node.js and Express.
- Implemented secure role-based access control for admins and members.
- Structured scalable database schema for managing users, subscriptions, and attendance records.

Gym Management System (Desktop)

github.com/Adib-96/gym_system

- Built a desktop gym administration system using Python and Kivy.
- Implemented QR-based access validation for real-time member verification.
- Automated subscription renewal tracking and billing workflows.
- Designed intuitive UI to streamline daily operations for gym administrators.

AirBnB Clone (Holberton School Project)

github.com/Adib-96/holbertonschool-AirBnB_clone_v3

- Developed a modular backend system simulating core Airbnb features (users, places, bookings).
- Designed RESTful API architecture with layered separation (models, routes, controllers).
- Implemented persistent storage and data modeling.
- Applied OOP principles and clean code practices in a team-based environment.

EDUCATION

FULL STACK SOFTWARE DEVELOPER (RNCP Level 6 – Bac+3/4)

CERTIFICATIONS

The Complete JavaScript Course

Holberton School | Tunis | 2022-2024

SKILLS

Frontend Development: HTML5, CSS3, Sass, Tailwind CSS, JavaScript (ES6+), TypeScript, Eleventy, Next.js, React

Backend Development: Node.js, Express, Firebase (Auth & Firestore), MongoDB, REST APIs

Tools & Technologies: Git, GitHub, Webpack, Vite, NPM, Babel, VS Code, Postman

Databases: MongoDB, Firebase Firestore, Redis, PostgreSQL
